# Introduction to Microsoft Azure Fundamentals

1. Completion of Describe Cloud Computing.

2. Completion of Describe Benefits of Using Cloud Services.

3. Completion of Describe Cloud Service Types.

Career Reflection Task:

1) What does this role do in a business or organization?

Answer: A Cloud Administrator is responsible for managing and maintaining an organization's cloud infrastructure. They oversee virtual machines, user accounts, security settings, backups, and overall system performance to ensure reliable and efficient operations across the cloud environment.

2) Why does this role interest you?

Answer: This role interests me because it closely aligns with my current experience as a Systems and Endpoint Technician, where I manage servers, monitor performance, and troubleshoot technical issues. Working in this position has helped me understand the importance of maintaining system reliability and security, which are key responsibilities of a Cloud Administrator.

3) What cloud skills or topic would you like to learn next based on this role?

Answer: I would like to learn more about Azure Active Directory, virtual network management, and cloud automation tools. These skills would help me expand my current IT experience into cloud environments and prepare for future roles in cloud system administration.
